## Checkpoint 1

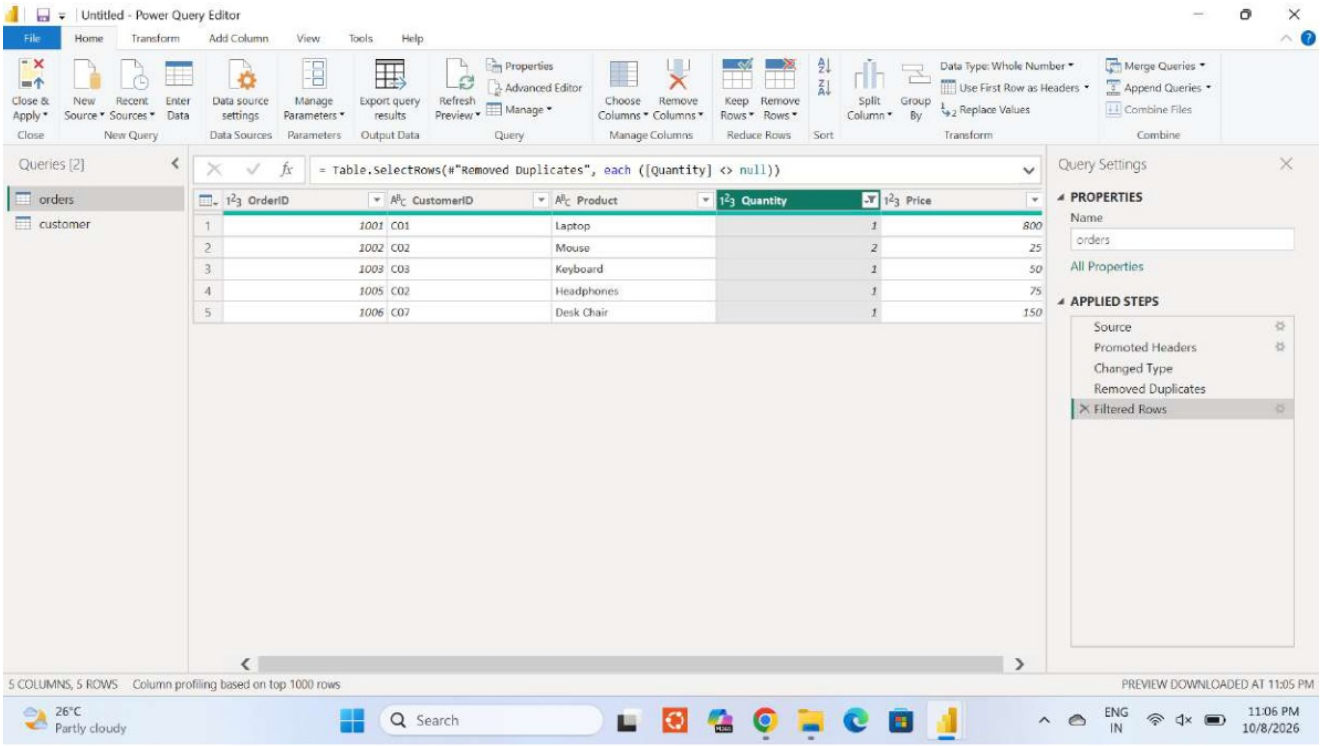

Checkpoint 1: Confirmed the assessment files are available in the working folder.

## Checkpoint 2

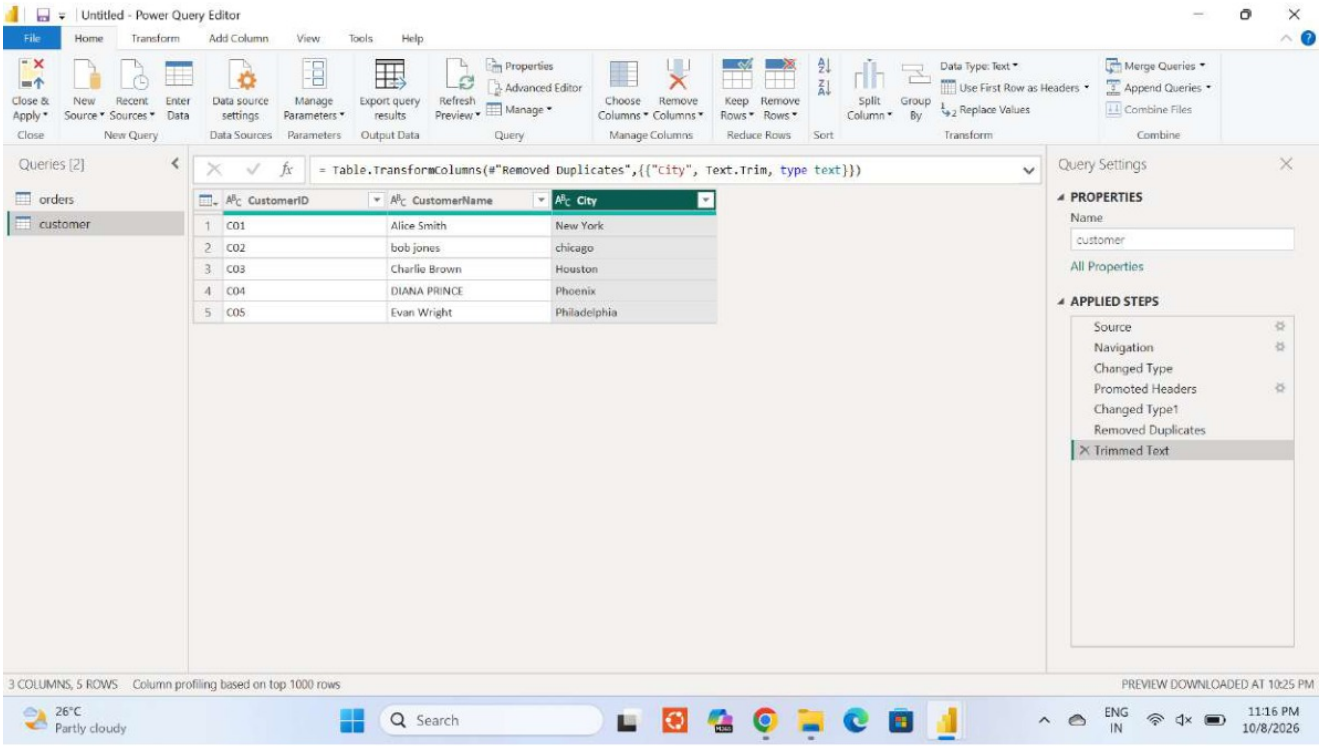

Checkpoint 2: Opened the source data in Power Query and reviewed the imported table.

## Checkpoint 3

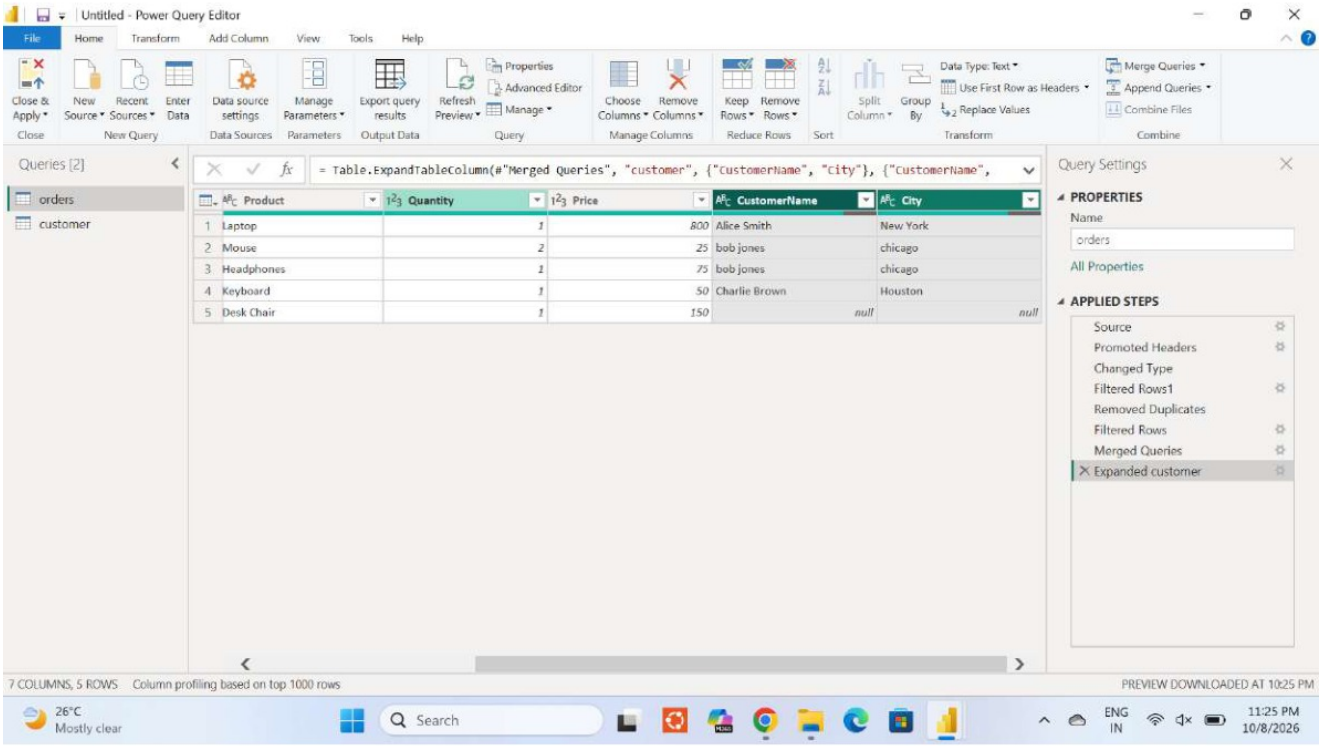

Checkpoint 3: Inspected the order data and identified fields requiring cleaning.

## Checkpoint 4

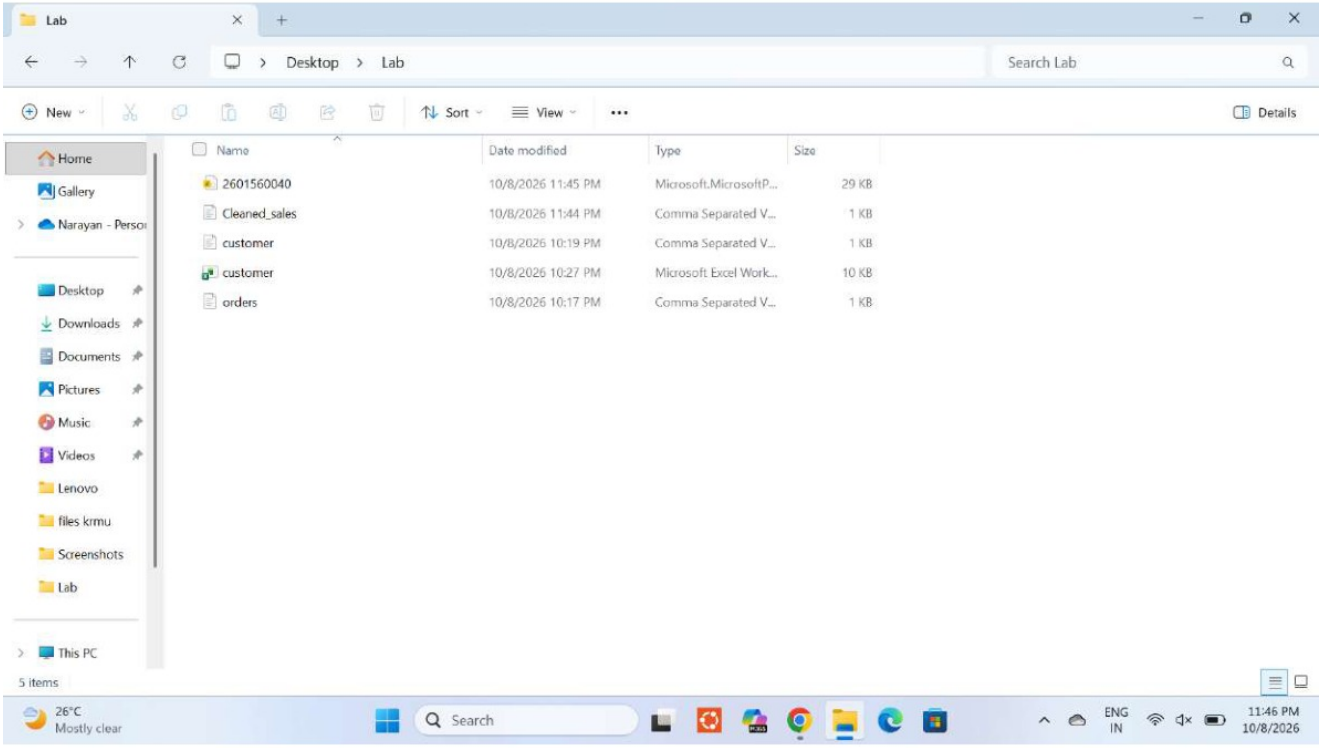

Checkpoint 4: Applied data-cleaning transformations in Power Query.

## Checkpoint 5

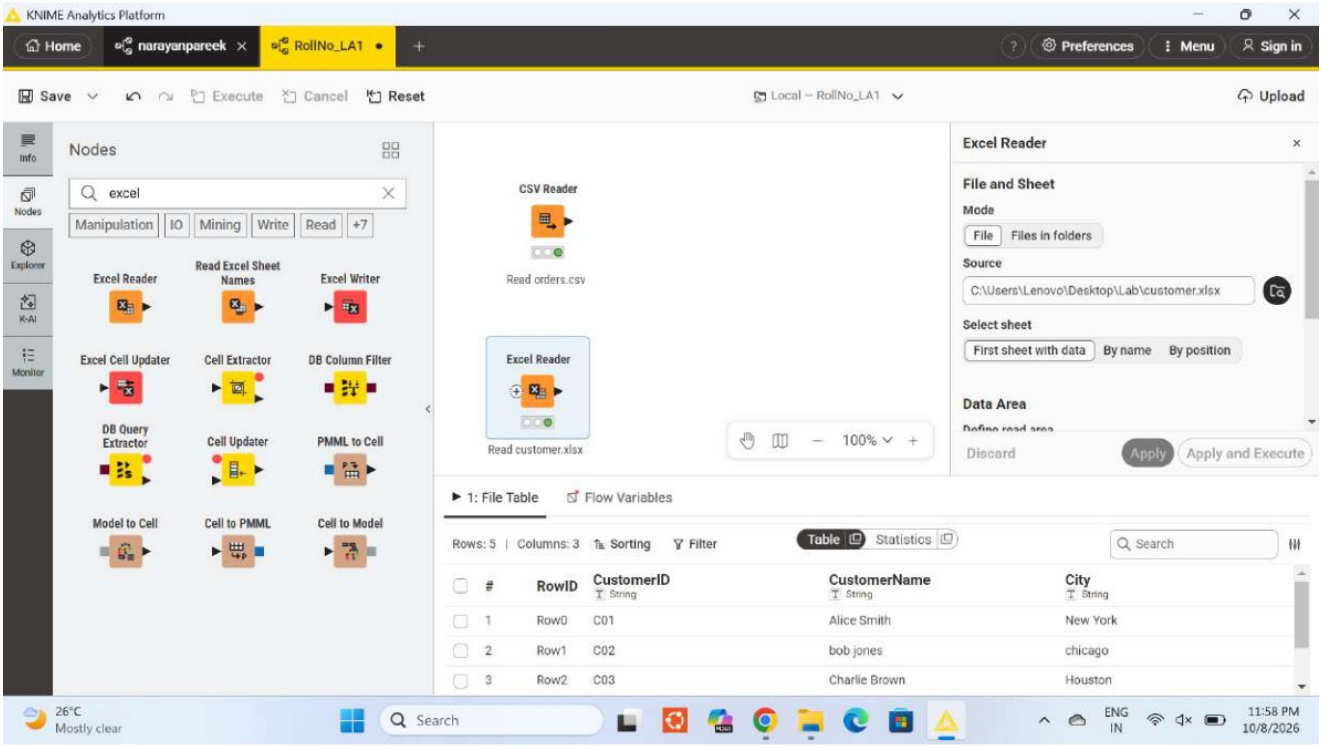

Checkpoint 5: Reviewed the transformed table and checked the resulting columns.

## Checkpoint 6

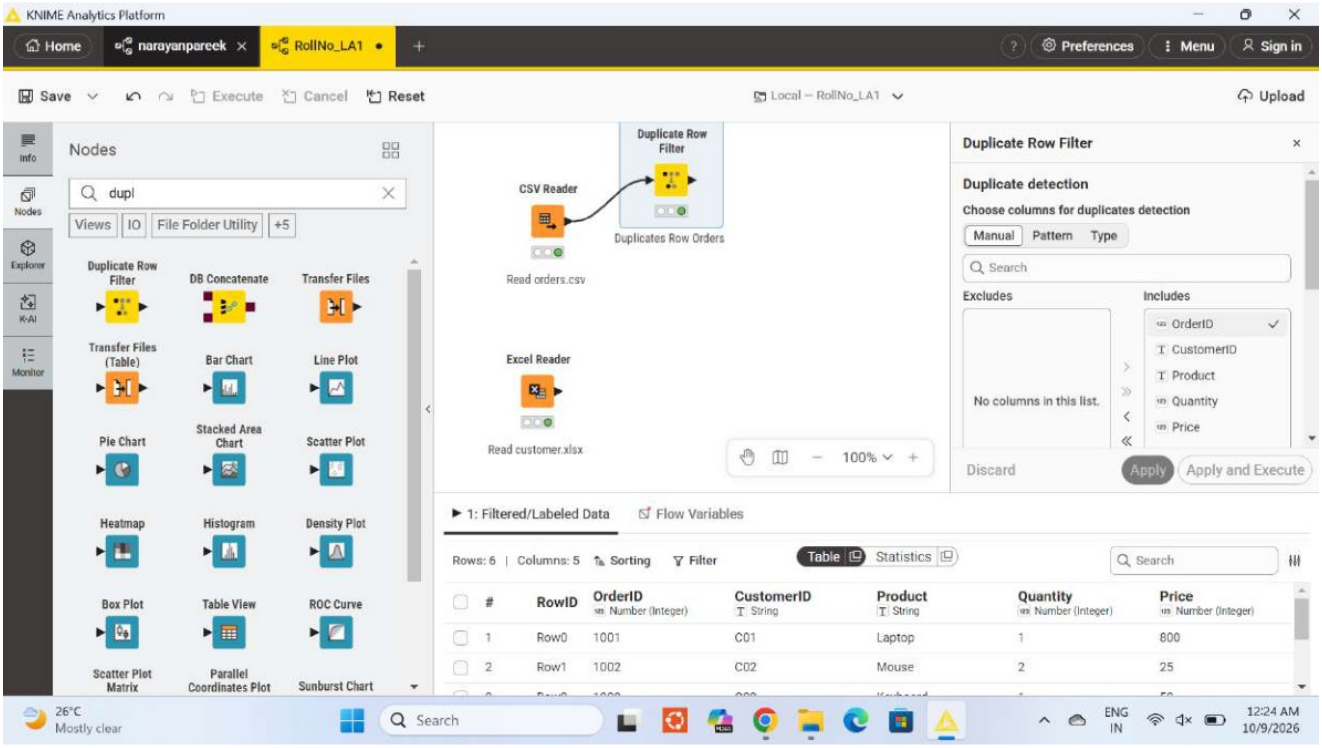

Checkpoint 6: Located the assessment files used for the KNIME workflow.

## Checkpoint 7

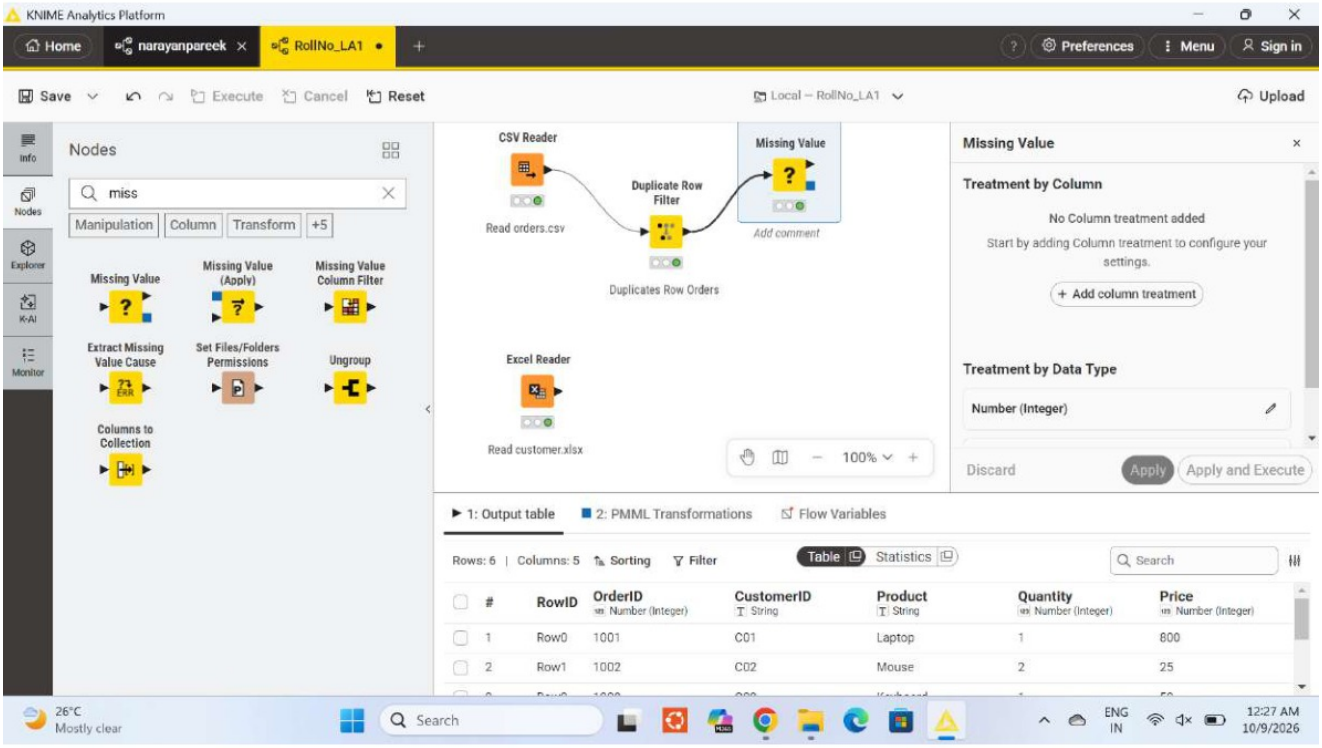

Checkpoint 7: Opened the KNIME workflow and reviewed the available nodes.

## Checkpoint 8

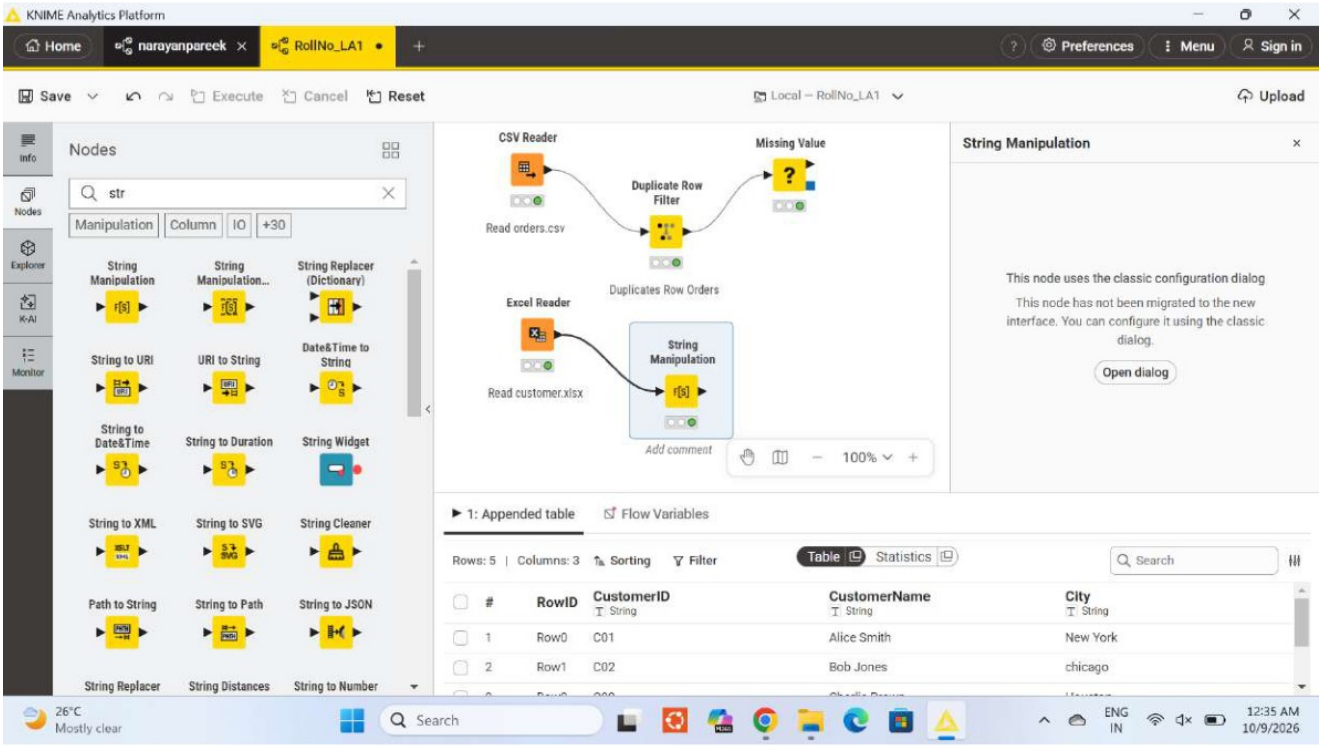

Checkpoint 8: Connected data-processing nodes to build the workflow.

## Checkpoint 9

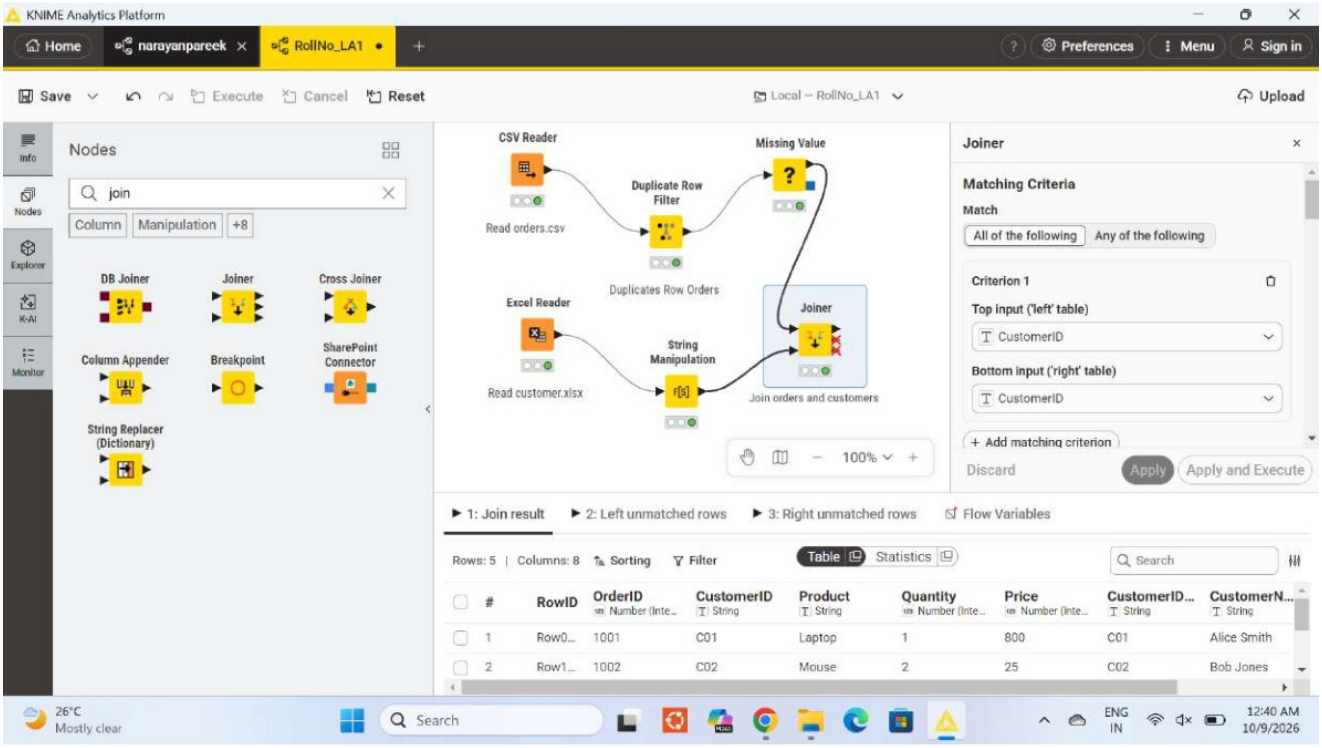

Checkpoint 9: Continued configuring the workflow for data preparation.

## Checkpoint 10

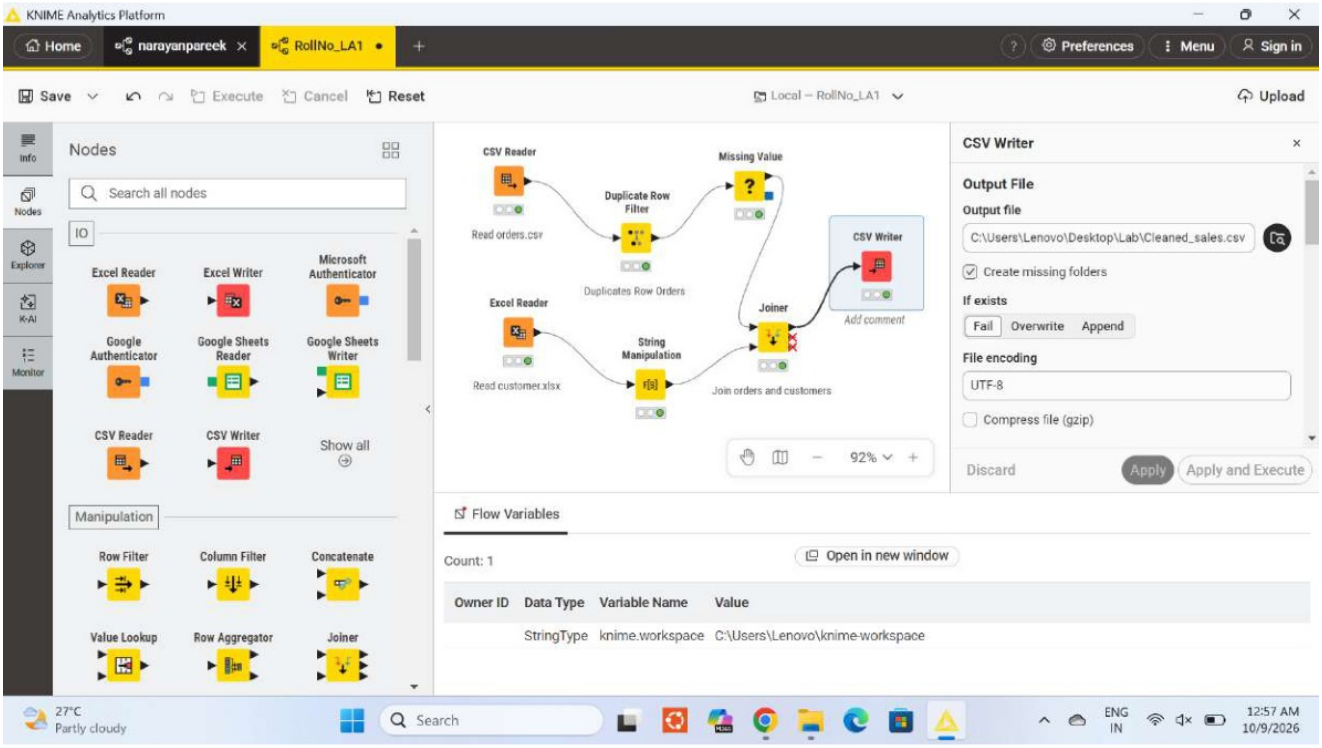

Checkpoint 10: Reviewed the workflow connections and processing sequence.

## Checkpoint 11

Checkpoint 11: Checked the workflow execution and intermediate results.

## Checkpoint 12

Checkpoint 12: Reviewed the final workflow state for the lab assessment.
